## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Pearlstein et al. (US Patent No. 3,754,939).

Referring to claim 1, Pearlstein et al. discloses applying a coating solution comprising palladium chloride and hydrochloric acid and applying an electroless plating to the surface of a substrate (particle) yielding conductive particles having a palladium alloy coating (table II, column 1 lines 12-24, column 4 lines 39- 52).

Referring to claim 2, Pearlstein discloses that there is 2 g/l of PdCl<sub>2</sub> (table II).

Referring to claim 4, Pearlstein discloses that the substrate can be copper (column 4 lines 39-52).

Referring to claim 5, Pearlstein discloses that the substrate can be glass this would be SiO<sub>2</sub> (column 4 lines 60-64).

Referring to claim 6, Pearlstein discloses that the plated coating comprises Ni-P (table II).

Claim Rejections - 35 USC § 103

Application/Control Number: 10/822,695

Art Unit: 1762

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pearlstein et al. in view of Chakraborty et al. (US Patent No. 5,525,570).

Referring to this claim Pearlstein et al. discloses all of the features of this claim as discussed above. It also discloses that the use of palladium alloy coated materials is known for use in catalytic chemical processing. It does not teach however that the substrates should be porous. However, Chakraborty et al. teaches that the catalyst layer should be porous because external roughness increases the surface area of the particles which increases the area of the particle available for reaction (column 2 lines 20-52). Accordingly, it would have been obvious to one of ordinary skill in the art at the

Application/Control Number: 10/822,695

Art Unit: 1762

time the invention was made to modify Pearlstein et al. to use porous particles as suggested by Chakraborty et al. with an expectation that the porous particles will form coatings with significantly more surface area with which the catalytic reaction can occur on.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Howard E. Abramowitz whose telephone number is 571-272-8557. The examiner can normally be reached on monday-friday 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy H. Meeks can be reached on 571-272-1423. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
